

Aionex OR View

Time to make a difference.

A Complete OR Picture

OR View visually coordinates the entire perioperative environment and provides detailed metrics from every aspect of each OR case.

- Better case management
- Hospital-defined workflows for pre-op, OR and PACU
- More surgical revenue opportunities

The screenshot displays a software interface for managing OR cases. At the top, there is a navigation bar with tabs for 'Staff Portal', 'Patient Information', 'Staff Information', 'Workflow', 'Status Boards', and 'Administration'. Below this, a sub-menu shows 'Pre-Op', 'Prep', 'OR', 'PACU', and 'Phase II'. The main content area is titled 'Pre-Op Patient States' and contains a grid of ten blue rectangular buttons, each with a checkbox and a label. The labels are: 'Visit by Anesthesia' (with a lock icon), 'Surgical Site Marked', 'XRAY Required', 'EKG Required', 'LAB Pending', 'Patient Prep', 'H&P', 'Pre-OP Completed', 'Assign PreOP Staff', and 'Pt in route to OR'. All checkboxes are currently unchecked.

Real-time Status to Staff

Each OR state is continuously monitored and updated, providing critical status updates to all medical staff.

Expedited OR Turnaround

To maintain schedule integrity, overall efficiency and maximum turnaround, some perioperative states trigger alerts to other states.

- *If someone tries to mark the 'Procedure Started' state before marking 'Surgeon in Room,' a Dependency Notice message is displayed.*
- *Once 'Procedure Closing' is selected, a notification is sent to housekeeping and an alert is sent to PACU that a patient is inbound.*
- *When 'Room Clean Finish' and 'Anesthesia Cleanup Finish' are both checked, OR View automatically loads information for the next patient assigned to the room.*
